# Track, Locate & Recover Stolen Computers

There were 1.6 million notebooks stolen in the United States last year. According to the FBI, only 3% of those stolen notebooks were recovered, meaning only 48,000 were recovered. Computer theft is second only to Auto theft!

Whether you have Windows, Linux, MAC, or PDAs in your environment, ComteqUSA can help you track your computer systems & PDAs with Brigadoon Software.

Unlike other tracking agents, Brigadoon Software allows the user or company to do their own monitoring at a significant reduction in cost. There are no yearly monitoring fees, no additional charges, and no hidden cost for single user version. Enterprise licensing is available for larger customers.

How does it work? Every time you connect to the Internet, Brigadoon sends a stealth email containing its exact location to a pre-determined email address you set. If a computer is stolen, when it goes online, it will send an email. It is highly tamper proof and cannot be removed by unauthorized parties.

It is completely transparent to the computer user. There are no icons, files or directories visible on the computer. It resides at a very low level and has been purposely disguised to appear to be part of the operating system. You won't find it running in the task manager and won't see it running as a process either.

*Brigadoon is highly tamper-proof. It will survive an operating system reload. Normal format, low level format, fdisk and fdisk/mbr commands have been "hooked" and do not work when Brigadoon is properly installed; that means a thief cannot "format" your hard drive. It works with all Internet connections including, dial-up, Network, Wireless, ISDN, Cable and DSL. It also works with all major firewalls and Anti-Virus software packages.*

**Starting at \$29.95 for single user versions**
