Mobile Network Solutions - Laptop Carts

Wireless classrooms are mobile classroom environments consisting of laptop computers, each equipped with a CD-ROM, large memories and disks, and most importantly, a wireless network link. The wireless network card connects laptops to a hidden wireless access point placed somewhere in the cart. The access point is connected to the wired network therefore allows access to the campus network and Internet.

The compactness and portability of laptops makes them a suitable replacement for pen and paper, while the computing power and network connectivity open up whole new instructional opportunities. Alternatively, wireless classrooms can be used as a replacement for conventional instructional computer labs. Loading laptops onto a mobile laptop cart and moving the cart to the desired location effectively allows any classroom to be used as a computer lab.

ComteqUSA can outfit your total mobile solution. Offering various configurations for your mobile solutions. Carts configurations for 10, 16, 18, 20, 24 and 30 Laptop or Notebooks. Slots accommodate all Laptops.

Many schools are using this solution as a mobile classroom. ComteqUSA can fully load this solutions with Notebooks, Printer, Overhead Projector and Wireless Access Point for a complete solution. Just plug it in and go.
